

POLYHEDRON OPTICAL MODULE

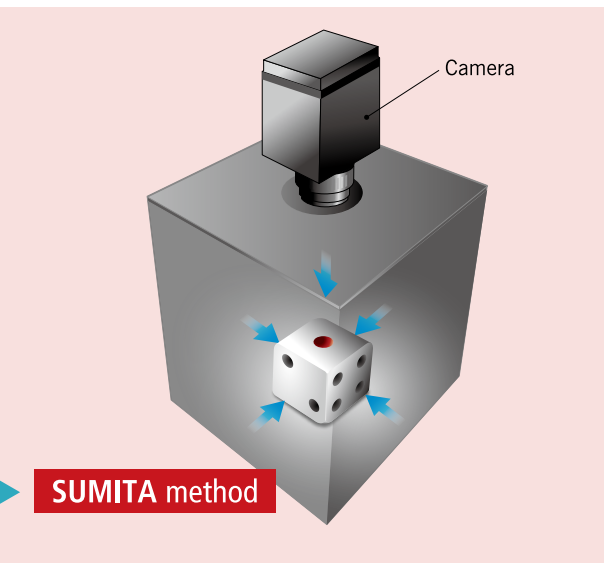

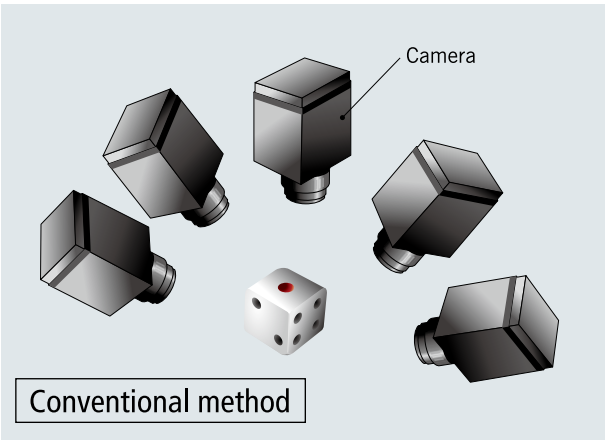

Only a camera can inspect five each surface simultaneously.

Several cameras are in need of inspecting on several surfaces. The module enable a camera to inspect surface up to five at once.

Applications	Inspection of electric component: resistance, transistor, capacitor and so on. Every small component such as screws, bolts etc.
--------------	--

Example

Five cameras

- ▼ Cost is high because of several cameras.
- ▼ More installation space needed.

One camera

- Cost is reduced because of less cameras.
- Compact system saves space.

Inspection of five surfaces at the same time.
